# Scalable | Robust | Compliant

**Our MFL-DfL utilizes state-of-the-art Magnetic Flux Leakage technology to provide feature detection, such as:**

- **Automated sizing**
- **Sizing focused**
- **Sizing + Severity**
- **Sizing + Correlation**
- **Manual validation of any given number of indications**
- **Illegal hot tap locations**

MFL-DfL

The MFL-DfL Advantage

- industry leading design
- compact configuration
- run as needed
- pipeline integrity maintenance
- disaster mitigation
- cost effective
- robust data collection
- illegal hot tap detection
- run-to run corrosion comparison
- rapid report turnaround

Ensure and maintain the integrity of your pipeline assets frequently

Run our MFL-DfL with an Enduro technician or on your own schedule without one - as often as you desire and receive quick turn-around of your integrity data. Either way, we're here for you every step of the way!

Quick Results

As an excellent option for lines with short launch and/or receive line traps - The data can be quickly examined to determine new features/anomalies and reported to operators for prompt response - saving time and money.
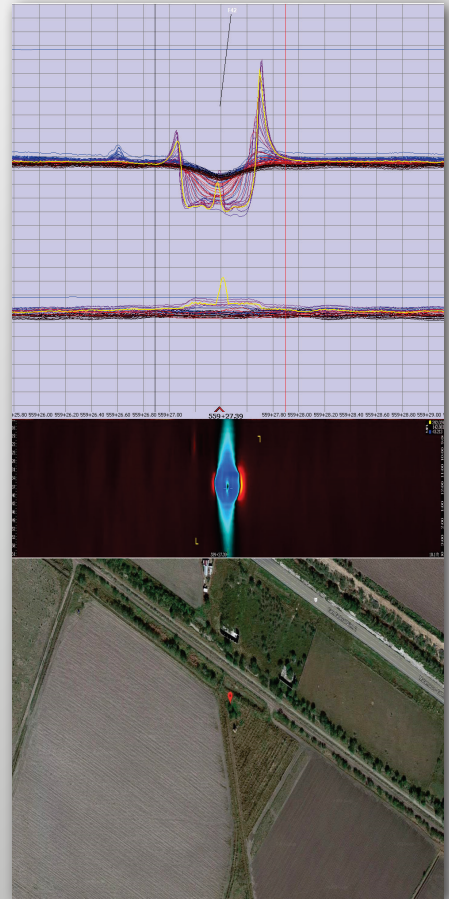

MFL-DfL

ILLEGAL TAPPING
TECHNICIAN-LESS
INTUITIVE MAINTENANCE
VALIDATE & CORRELATE

Analysis Comparison

Analysis of the pipeline data can be conducted and compared to previous runs of the MFL detection tools.

A correlation report will identify any new tap features; new features that were not present in previous tool surveys are quickly recognized.

Prevent Catastrophes

By locating and addressing any potential integrity threats immediately, this will mitigate chances of a future catastrophic event.
